Transportation Advisory Committee

Meeting date: November 16, 2026

Agenda Item #: 8 (Attachment F)

Mobility hubs in the Denver region

Agenda item type: Informational briefing

Summary
DRCOG published Mobility Hubs in the Denver Region, a resource which explores examples, best practices and establishes a regional definition and typology for mobility hubs.

Background
There are a wide range of definitions, applications and practices when it comes to mobility hubs. DRCOG developed this resource to explore the various definitions for mobility hubs across the Denver region and to provide a framework for communities who may be in the early stages of planning mobility hubs.

The resource explores definitions of mobility hubs across the region and across the country; establishes a regional definition for mobility hubs; presents a typology based on neighboring land use, community needs, and available transportation options; and includes a list of mobility hub examples by type. This resource provides information for local government staff, including land use and transportation practitioners looking to plan and implement mobility hubs in the Denver region. The resource also provides guidance on best practices for mobility hub planning and implementation. To develop this resource, DRCOG staff met with and consulted several local jurisdiction and agency partners including Castle Rock, Smart Commute, RTD, and CDOT.

The staff presentation will review the high-level takeaways from the resource, including what mobility hubs are and why they are important for multimodal mobility. The presentation will also review examples of existing mobility hubs across the Denver region.

Action by others
